31.08.2026

Getting started

I (used to) work with... (multiple answers possible 😊)

Quantitative data

Qualitative Data

Data from participatory
research approaches

How familiar are you with the FAIR principles?

FAIR what?

I basically invented them

I would find / understand data from 10 years ago...

... in a “could take a while”

... in a few seconds

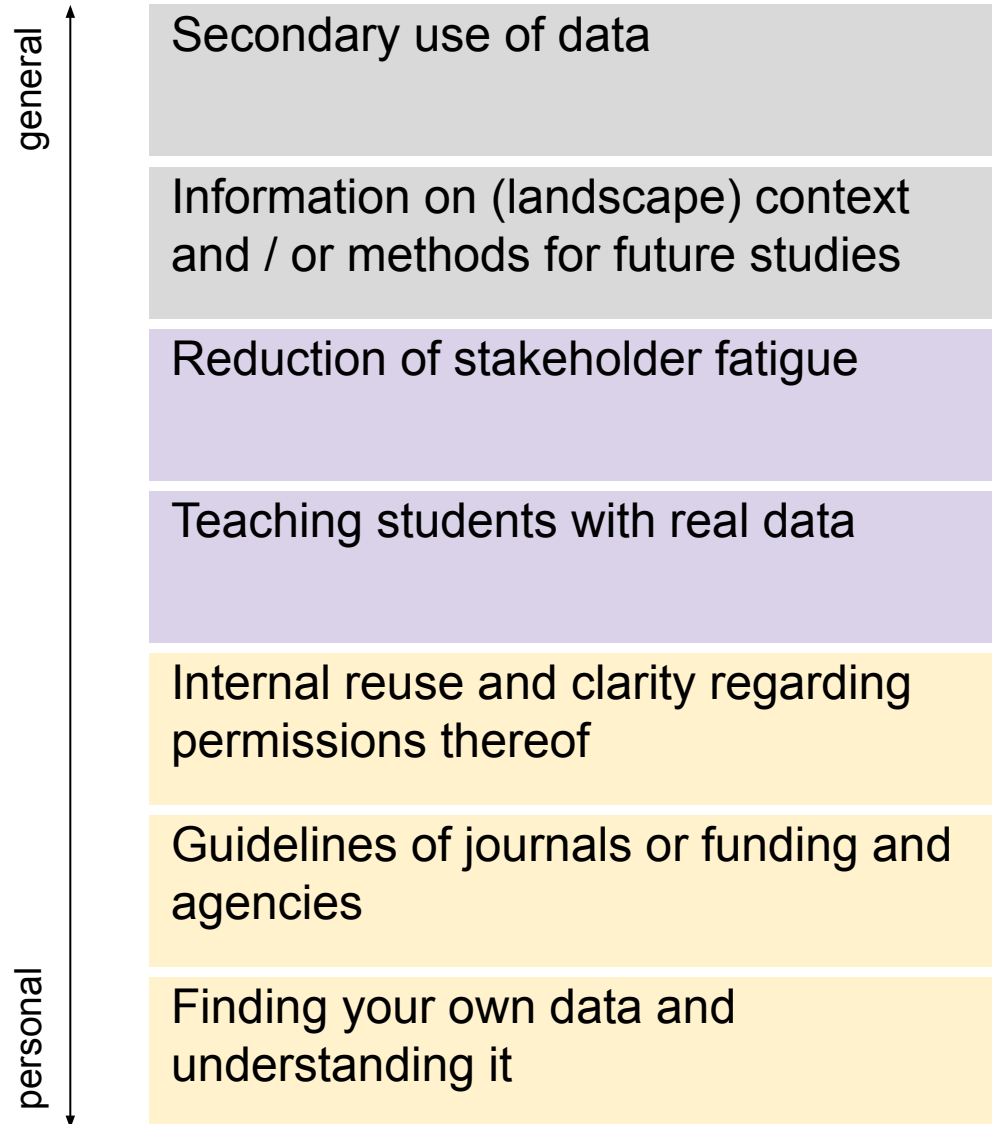

FAIRqual – Project Background

Project website
<https://fairqual.github.io/website/>

- **TdLab** and Global Health Engineering ETHZ
- Fall 2024 – 2026
- Based on workshop & expert interviews
- Outputs: **E-learning**, toolboxes (Tdnet; SHAPEID), paper
- Funded by the ETH Open Research Data Program

Motivation

FAIR Principles

F indable	(Meta)data have a persistent identifier
A ccessible	(Meta)data are retrievable (open or authentication / authorization procedure where necessary)
I nteroperable	(Meta)data use a formal, broadly applicable language for knowledge representation to integrate them with other data
R eusable;	(Meta)data are well-described with accurate and relevant attributes

Wilkinson et al. 2016; www.go-fair.org

... from FAIR data to data governance

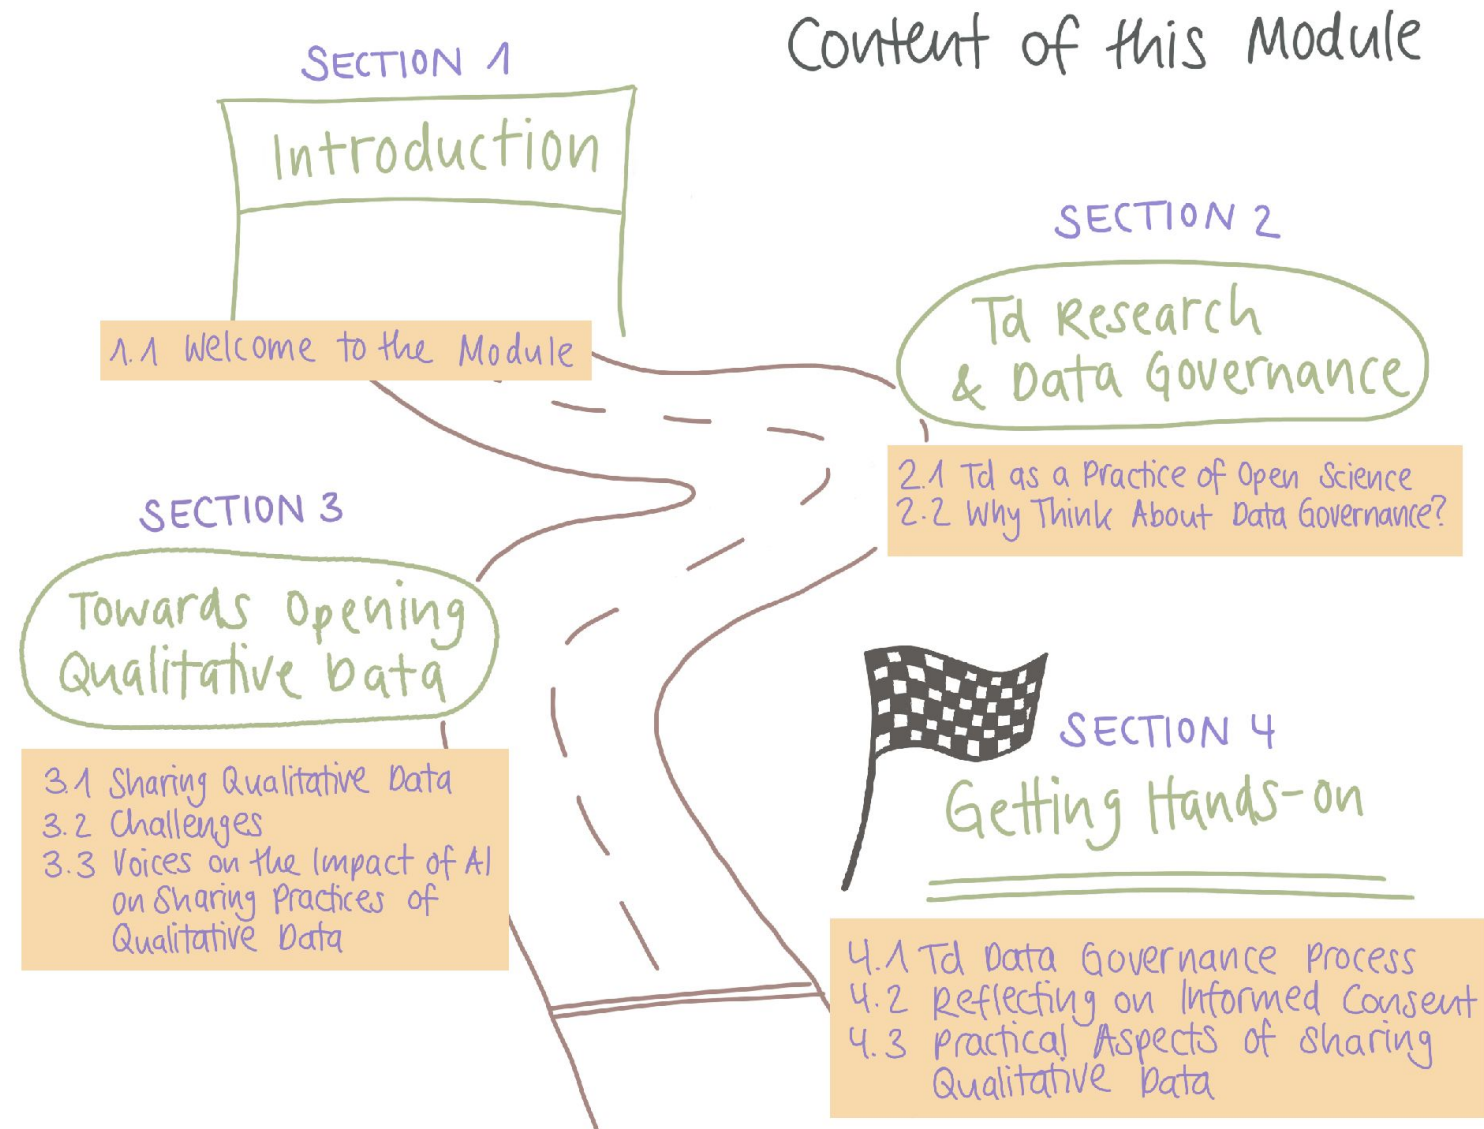

Transdisciplinary (T+D) Landscape Studies

Landscape scenario for 2060 (picture from KLANG project; Elena Siegrist / WSL, © Ikonaut)

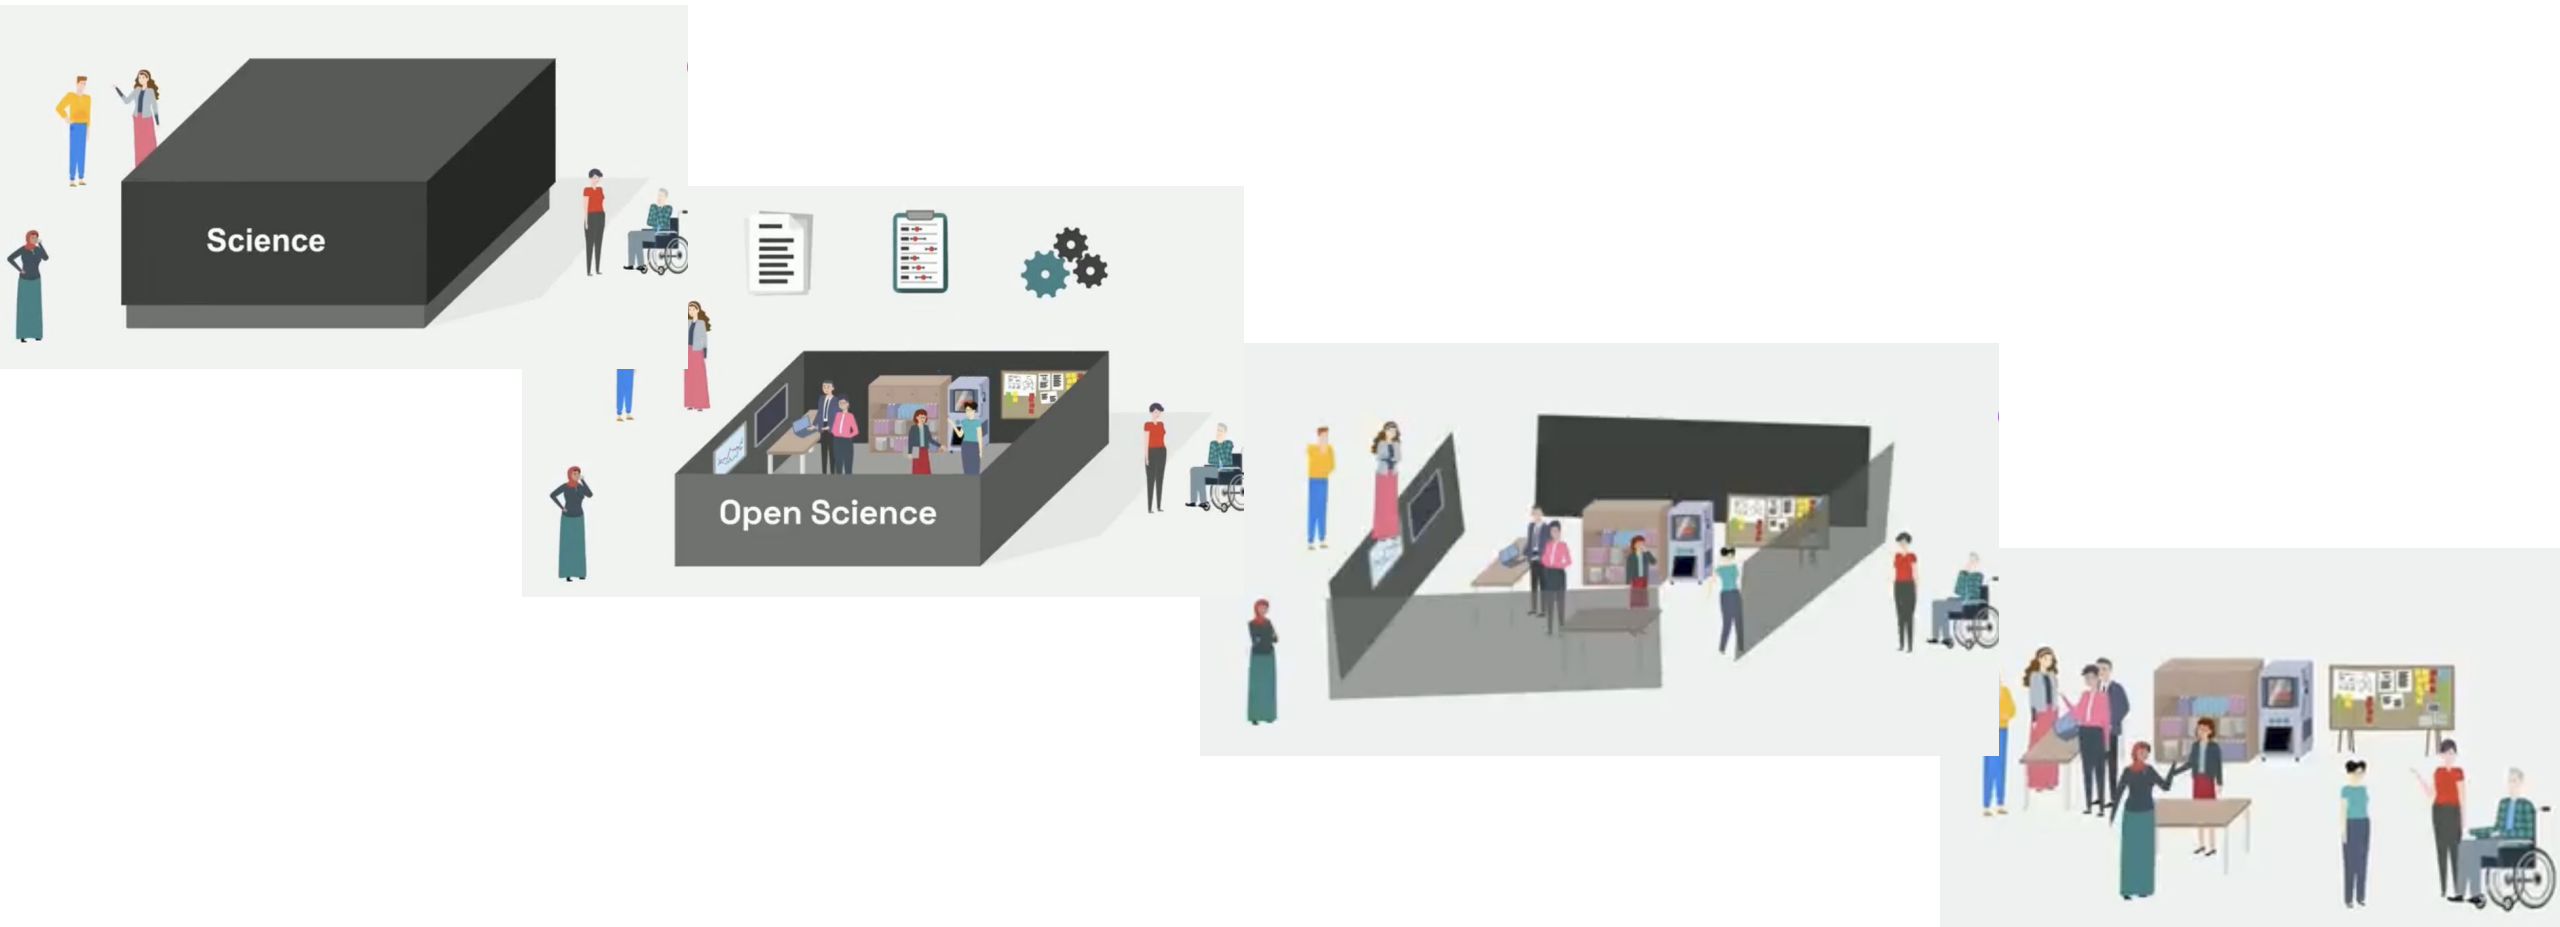

E-Learning: Qualitative Data Governance for Td and Participatory Research

© Joelle Reifenrath, FAIRqual project

Section 1 | Td Research & Data Governance

[Td as a Practice of Open Science]

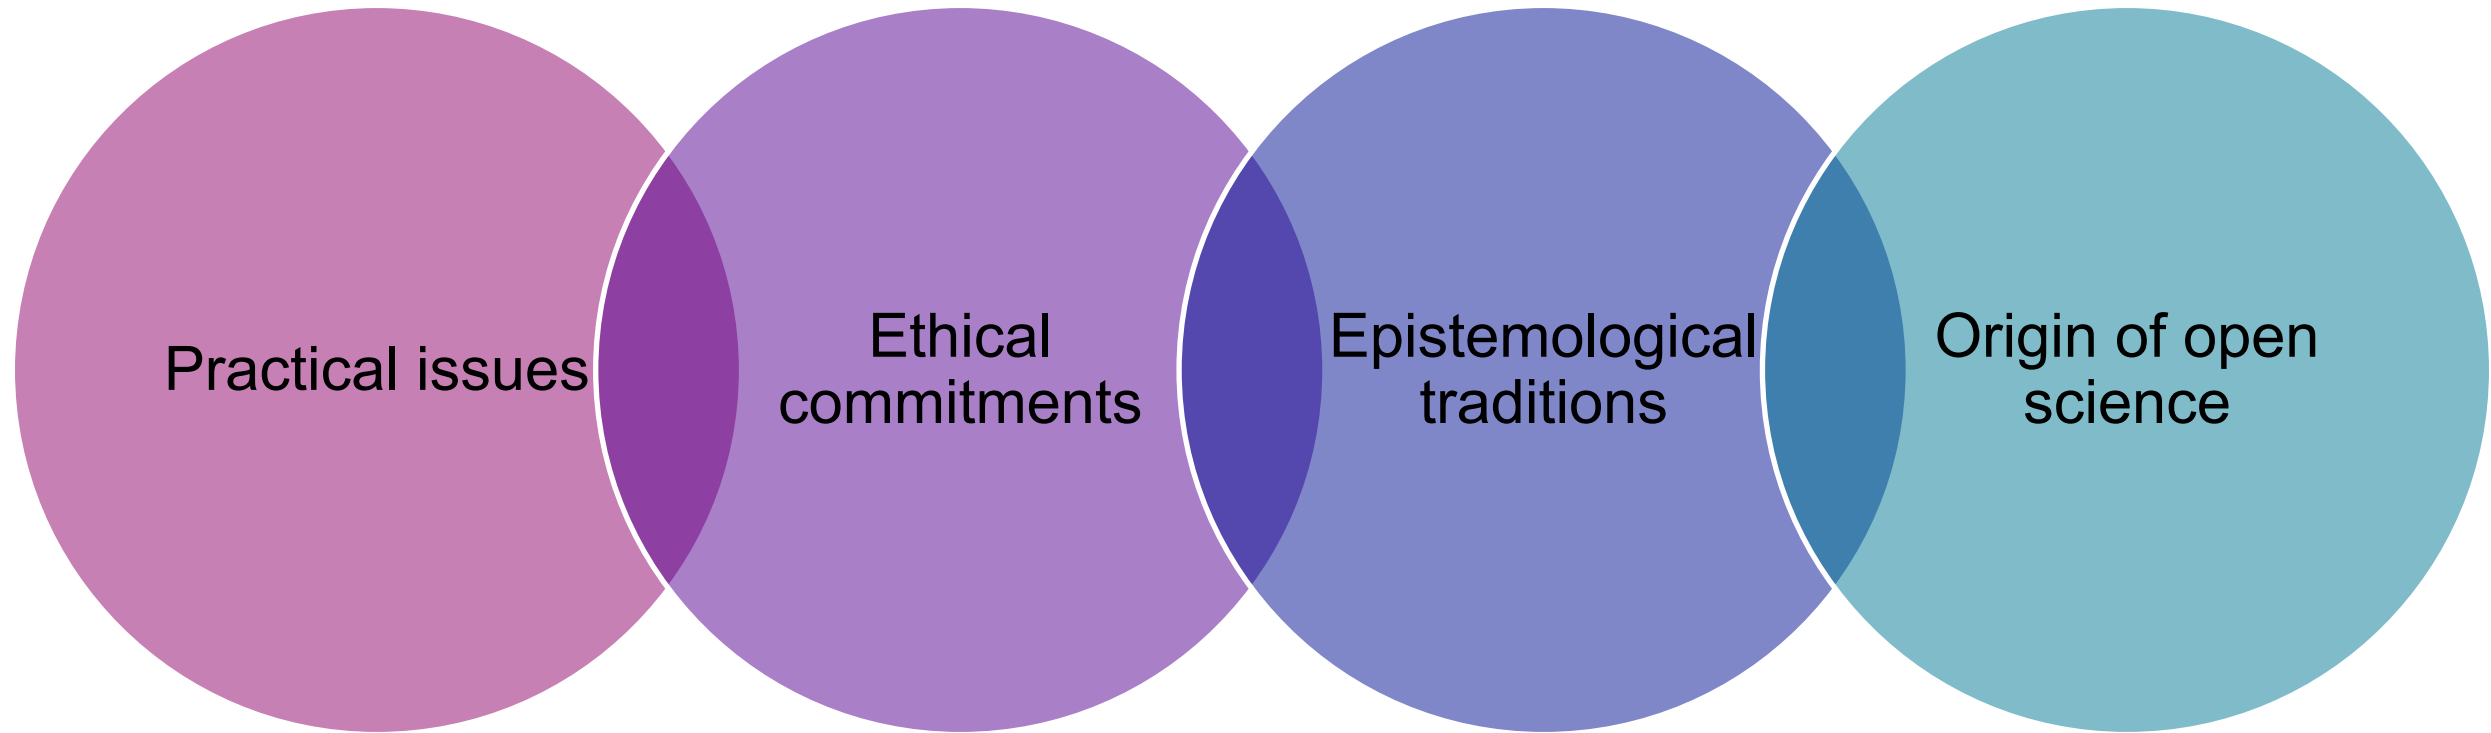

Section 1 | Td Research & Data Governance

[Why think about data governance]

Layer	What it does	Special qualitative or Td concerns	Who should do it
Data governance decides	who may make which decisions about the data, what can be shared in what form, and who is accountable?	Co-creating concepts early in the project	Researchers and practitioners together
Data management implements	day-to-day handling of data across the life cycle: storage, organization, documentation, formats, and secure processing	Putting ethical commitments such as confidentiality into practice.	Usually, researchers. Practitioners when they have capacity. It can be assisted by a support team (e.g. Scientific IT Services at ETH)

Section 2 | Towards Opening Qualitative Data

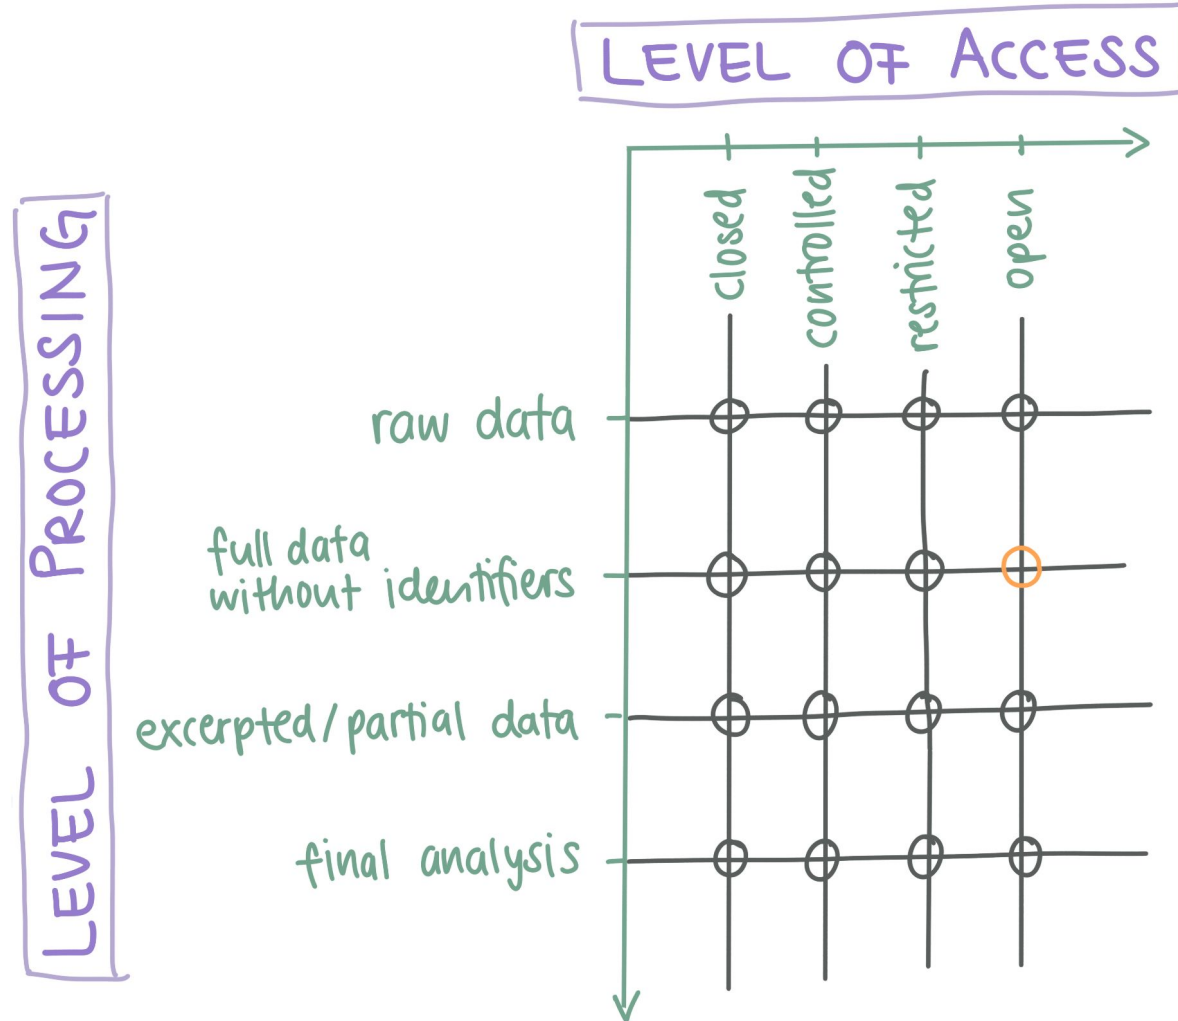

Section 3 | Getting Hands – on [A Td Data Governance Process]

- Data governance decisions are being taken by researchers AND practitioners
- Think about data governance from the beginning – results of co-designing data governance concept inform ethic proposals / informed consent forms
- A data governance concept is created in the beginning and is continuously updated

Different Grades of Sharing

Thanks for the attention!

Some thematic take home messages

- Td / participatory research and Open Science share common traits
- Qualitative data can - in certain contexts - be shared; increasing visibility is nearly always possible
- Data from Td / participatory processes is co-created and data governance could be co-created too
- Start thinking about data governance from the beginning – make it a functional part of your research!

Where to find the e-learning?

- Open Learnity Platform (end of September)
- Zenodo

How to find it? To receive an update once it is posted...
